OBJECTIVE FUNCTION

Main metric – **KSPC** metric

Keystrokes per character (KSPC) is the number of keystrokes, on average, to generate each character of text in a given language using a given text entry technique

$$KSPC = \frac{\sum\left(K_w \times F_w\right)}{\sum\left(C_w \times F_w\right)}$$

where K_w is the number of keystrokes required to enter a word,
C_w is the number of characters in the word, and
F_w is the frequency of the word in the corpus

OBJECTIVE FUNCTION

Secondary metric – **Learning Performance** (LP)

Learning Performance (LP) is the numerical indicator of the learning rate (based on calculating the similarity of the proposed keyboard with the default)

$$\text{Similarity} = \sum_{i \in \alpha} \left(|k_{i_x} - q_{i_x}| + |k_{i_y} - q_{i_y}| \right)$$

where i is a letter in alphabet α,
the set of lowercase letters
from ‘a’ to ‘z,’ and kix
and qix
are the x-indices of the i key
on the given keyboard layout and default

ALGORITHM

METRICS

	kspc(exclude space)	kspc	lp(lexicographic order)	lp(qwerty)
baseline-layout.json	1.8306	1.9174	83	37
